ergonomics®

# WHO WE ARE

**W**orkrite Ergonomics is an internationally recognized leader in the development of innovative programs and ergonomic product solutions for the modern workplace. From coast to coast, and around the world, progressive companies turn to us for the most reliable service, in-depth knowledge and highest quality ergonomic solutions.

For more than 25 years, Workrite has set the standard for the ergonomic office product industry. Our approach to business is simple and our record of success speaks for itself.

Our award-winning product portfolio has expanded to now include the ISE and Line of Sight™ brands, delivering expanded ergonomic solutions as well as innovative solutions for education and training centers.

No one knows ergonomics better than Workrite—it's not just something we do, it's all that we do!

# WHAT WE DO

Every Workrite product and program is designed with the direct input of our partners in the ergonomics community. Our designers and engineers incorporate modern design techniques, the latest technologies, and the highest quality specifications in the industry to create product solutions that are sure to meet the needs of today's dynamic organizations.

A focus on supporting healthier, more productive workplaces is the primary driver behind our flexible solutions that can be easily adapted to virtually any one, in any office environment. These are just a few reasons why even the most demanding organizations turn to Workrite for their ergonomic needs.

## SIT TO STAND SOLUTIONS

At Workrite Ergonomics we take issues like neck and back pain, blurred vision, and headaches caused by extended computer use seriously, and are committed to helping organizations fight these increasingly common problems. Our award-winning sit-to-stand product offerings feature the widest selection of design options in the industry as well as the flexibility to mix and match features to build the perfect solution for virtually any application or budget. Our products give you the flexibility to accommodate a wide variety of users and provide a healthier work environment designed to increase both comfort and productivity.

## ERGONOMIC PRODUCTS

Since creating our first elevated monitor solution over two decades ago, the ergonomic industry and Workrite have changed, a lot. What hasn't changed is our passion for developing the best ergonomic solutions possible and our keen focus on listening to the industry. Every Workrite product is designed with the direct input of the ergonomics community to ensure they not only perform complex functions but are intuitively simple to use. From adjustable keyboard platforms, monitor mounts to task lighting, Workrite is your one stop ergonomic solutions company.

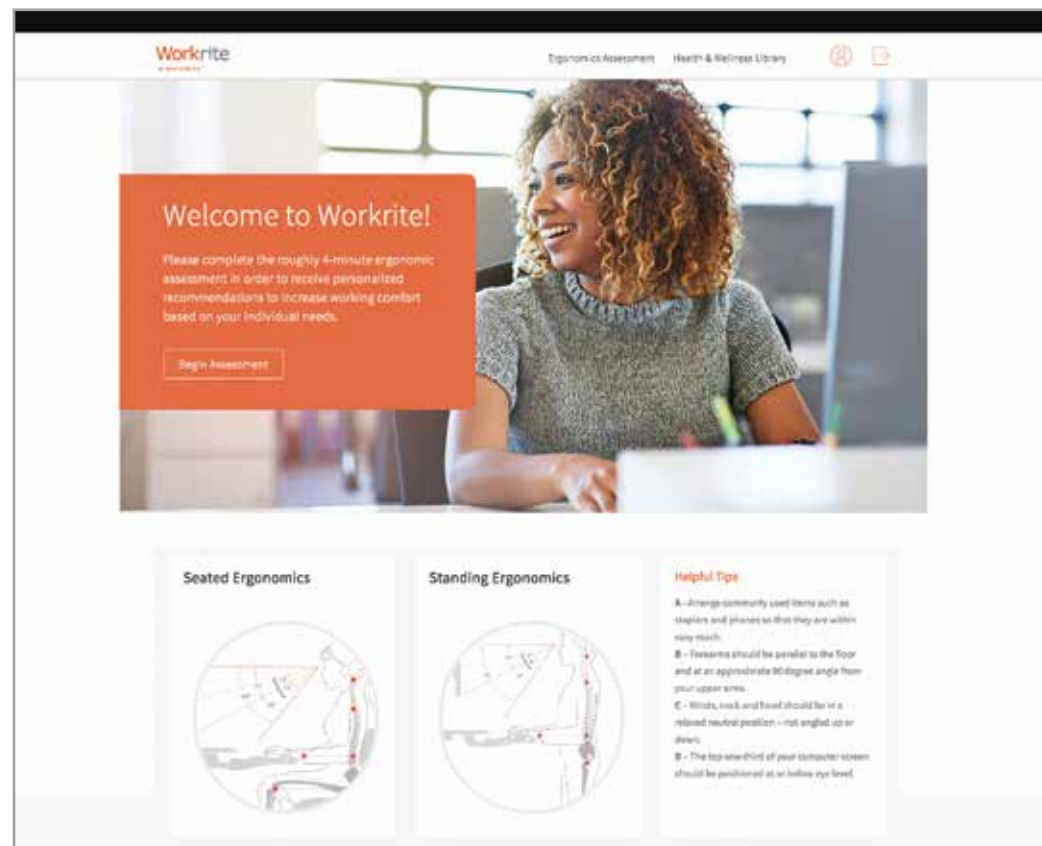

## TRAINING AND EDUCATION PRODUCTS

Our Line of Sight™ brand of products have re-invented training and educational classrooms. Traditional computer based classrooms and training rooms can be eye sores. Computers sit on top of desk, taking up the whole desk space and blocking the view of the student to the instructor. Exposed cables can cause accidents and expensive equipment is vulnerable to theft and damage. Often, they sit empty for large portions of the day when there are not computer based classes in session. Now, imagine a solution that improves the quality of teaching, solves damage and theft issues, and increases room utilization. Line of Sight™ multifunctional desks are that solution.

## COACHING, WELLNESS, AND EDUCATION

There are a lot of companies in the market today selling products that do not address the true ergonomic requirements of the modern office worker. Workrite has always focused on providing solutions and outstanding value by focusing on the right tools and having the most experienced and highly trained team in the industry. One stop shopping can be convenient on the surface but is rarely the best option to meet your ergonomic needs.

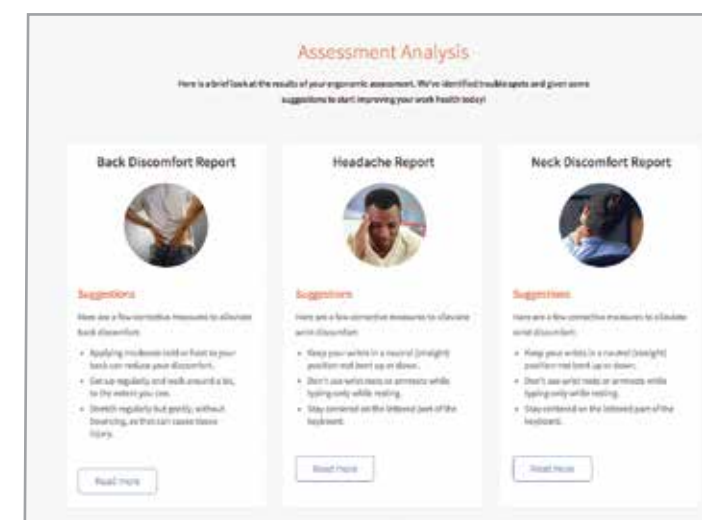

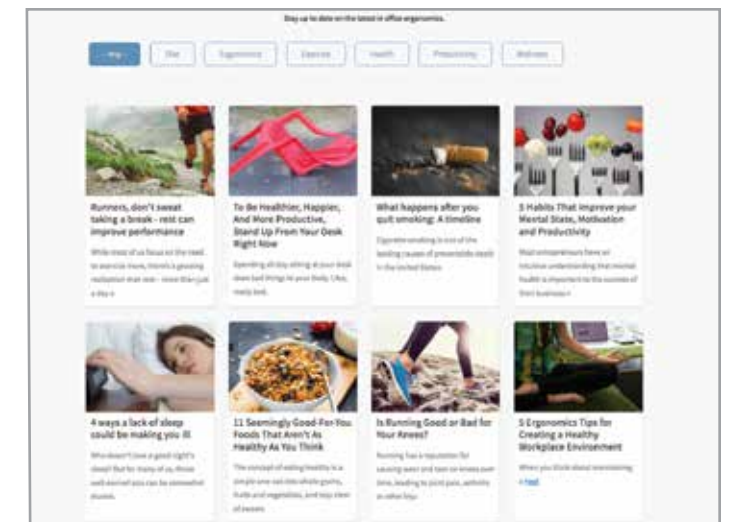

## WORKRITE.CARE

Workrite Ergonomics' award winning products are just part of our total ergonomic solution story. We have developed an easy-to-use, highly customizable, cloud based ergonomic assessment and educational tool called Workrite.care. It was designed to provide an affordable solution for organizations that need to develop an effective ergonomic program from the ground up, or to enhance any existing workplace wellness program.

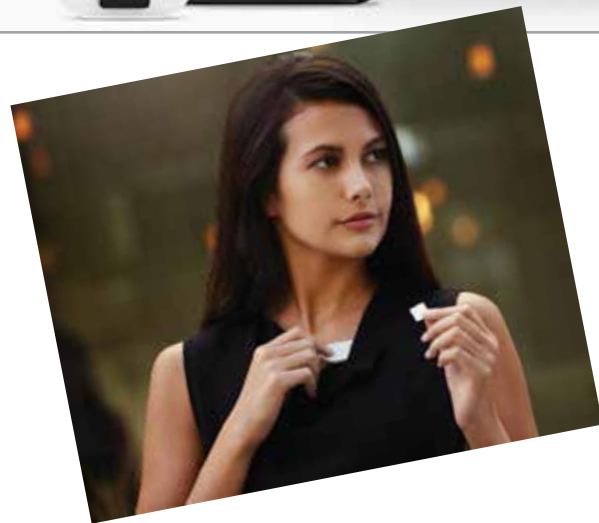

Workrite.care was created based on Harvard Medical School's interactive health database and Workrite Ergonomic's 25 year legacy of providing cutting edge ergonomic solutions for the ever changing workplace. The platform is robust enough to be used as a foundation for developing a new health and wellness program and flexible enough to be an invaluable addition to your existing company health and wellness initiatives.

Regardless of company size or industry, it has never been easier to complete an ergonomic assessment of your workforce. Workrite.care features a 5 minute, web based visual assessment tool that enables your company to obtain real time health information from employees working in any location or department, securely and efficiently. Workrite.care can help eliminate the logistical nightmare of traveling, scheduling assessments and providing employees the privacy they deserve, creating more time to actually address issues and focus on those most at risk for ergonomic injuries.

Workrite.care can be effectively used as a standalone assessment tool or as the perfect addition to your existing ergonomic or wellness program. Whether you're just laying the foundation for your company's wellness program or you're looking to take your existing program to the

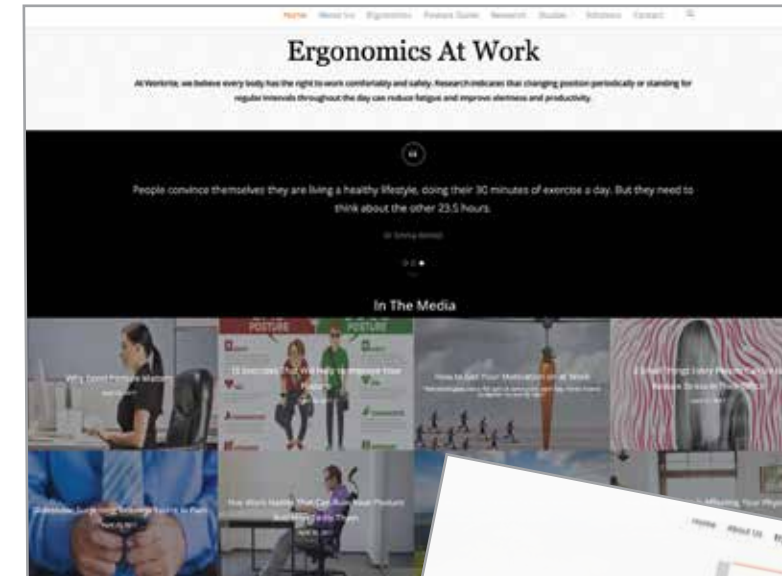

next level, Workrite.care has the flexibility to get you there. Its highly customizable nature, built in health library, and user friendly interface make Workrite.care the perfect solution for any modern workplace.

## LUMO LIFT

At Workrite, we also understand the importance of good posture as it relates to any ergonomics program so 2 years ago we added the Lumo Lift to our assortment. The Lumo Lift is a small, lightweight wearable solution to help achieve better posture. Worn near your collarbone, it gently vibrates every time you slouch to remind you to sit tall and stand straight. Its unique biomechanic motion sensors have the ability to track your posture and activity levels throughout the day for progress tracking via the Lumo Lift app.

## ERGONOMICSATWORK.ORG

Finding unbiased, fact based information regarding ergonomics can be a daunting task. Our Ergonomicsatwork.org website was created to provide anyone who accesses it a one stop repository for current ergonomics topics in the news. We scour the web for news articles, research studies, white papers and a wide variety of other information and organize it in an easy, searchable site that is continuously updated with the latest information available.

No matter what your ergonomic need may be, let us help your organization reach its true potential by delivering ergonomic solutions that are designed to enhance your employee's comfort and increase productivity.

# WHY WE DO IT

Ergonomics is at the core of everything that we do. We understand that companies invest in ergonomics programs because they know that happy, healthy workers are more productive. We also understand that not all companies have the same level of resources available and we have developed an array of different product solutions, educational resources, and support programs that can be combined as needed to provide the perfect solution for any organization or budget.

# LET US HELP

Let us work with your team to understand the needs of your organization and make recommendations for products and services designed to optimize productivity and provide the greatest possible return on your ergonomics investment.
